**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election with traverse of claims 1-5 in the reply filed on 5/17/06 is acknowledged. The traversal is on the ground(s) that toner is in process of making and using the same toner. This is not found persuasive because of different search and class. However the requirement will be reviewed and possible rejoined at the time of allowable subject matter.

The requirement is still deemed proper and is therefore made FINAL.

***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 6/04 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itabashi [6689525] and further in view of Takasaki et al. It is noted that the claims are directed to a toner with a colorant and a metallophthalocyanine derivative. The skilled artisan knows the use of a phthalocyanine as a colorant. Itabashi teaches the use in a toner of

a pigment and a phthalocyanine that is absorptive on the pigment with an oligomer that prevents re-agglomeration of the pigment. Takasaki et al teaches the use of oligomer as amide containing sulfate group as a binder in an electrophotographic toner with colorants. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the binders of Takasaki et al as the binder of Itabashi in providing a toner with a colorant, phthalocyanine and binder. It is noted on page 24 of applicants specification that the metallophthalocyanine forms a polymer complex with the polymer having an amide group and acts as a dispersant on a colorant. The coloring power is negligible when the amount is 0.01 to 0.5 parts by mass with respect to 100 parts by mass of a binder resin. Such language would overcome the above rejection.
